EDUCATION

Ecole Supérieure Privée d'Ingénierie et de Technologies (ESPRIT)

2021 – 2024 | Tunis, Tunisia

Engineer's Degree in Computer Science

Speciality: Data science

Institut préparatoire aux études d'ingénieur de Monastir (IPEIM)

2019 – 2021 | Monastir, Tunisia

Mathematics & Physics (MP)

PROFESSIONAL EXPERIENCE

Split Push, Software Engineer

Aug 2025 – Present | Ariana, Tunis

- Led the technical architecture and design of an ERP system for a French ESN covering candidate and client management and delivering the ESN end-to-end workflow: client requirements -> AI assisted candidate matching -> proposal -> order -> mission -> contract -> activity report (CRA/PVA) -> invoicing and payment.
- Designed the normalized data model (100+ entities), the RBAC authentication/authorization system, with customizable user roles, per-resource permissions and group-level permission extension using Keycloak.
- Designed an Asynchronous CV import pipeline (RabbitMQ + external AI document processing) handling PDF, DOCX and images (at ~1–3 s per CV) used to migrate 10,000 candidates.
- Designed no-code configuration features enabling users to customize the ERP system: custom fields with validation (dynamic forms), configurable multi-step approval workflows for status transitions, translatable entities, document engine generating pixel-perfect PDF documents (anonymized CVs, proposals, orders, CRA/PVA, contracts, invoices) using Playwright + Handlebars, and a drag-and-drop editor for custom sales-administration (ADV) workflows exposed via REST API.
- Built the Angular frontend from Figma design system: user interfaces, custom UI and reusable components using PrimeNG, i18n and Set up Docker/Coolify deployment across dev, test and production environments.
- Full Stack: Java, Spring Boot, PostgreSQL, Keycloak, RabbitMQ, REST API, Angular, PrimeNG, Docker, Coolify

TANIT - New Earth Solutions, Software Engineer (Remote)

Aug 2024 – Jul 2025 | Berlin, Germany

- Recruited to build an AI platform spun out from the successful internship with greentech.training; the startup was then selected as 1 of 30 from 1,300+ global applicants for the Startupbootcamp Accelerator.
- Developed a multi-vendor e-commerce marketplace for organic seeds, compost and farm produce, by leveraging the Vendure ecommerce framework, integrating Stripe for payments, Shippo for fulfillment, and Resend for email notifications.
- Engineered a data-driven "Farmer's Toolkit" that captures on-farm data (geographic location, size/number of fields, sow/harvest dates, crop ratio and spatial arrangement) to generate intercropping guides, estimate seed/compost costs by integrating with the marketplace, and recommend cash and companion crops by leveraging the previously developed ML models.
- Full Stack: Next, React, TypeScript, Vendure, PostgreSQL, Docker, Microsoft Azure

QNB Group, Data Engineer Intern (Graduation Project)

Feb 2024 – Jul 2024 | Tunis, Tunisia

- Built an ETL pipeline in Python to process and analyze 10000+ IT incident and security vulnerability records, automating ingestion from raw Excel/CSV files into a star-schema data warehouse (MS SQL Server).
- Fine-tuned an 8B parameter Llama 3 model using LoRA to perform 5 distinct NLP tasks on 1000+ multi-lingual IT support tickets, including summarization, categorization, key information extraction, and semantic duplicate detection, achieving 98% accuracy in detecting semantic duplicate IT incidents.
- Designed and delivered 2 interactive Power BI dashboards with 15+ interactive visualizations, leveraging DAX queries to provide real-time insights, enabling the IT team to prioritize critical vulnerabilities and identify recurring incident clusters.
- Tech Stack: Python (Pandas, SQLAlchemy), MSSQL Server, Power BI (DAX), LLM Fine-Tuning (Llama 3), ETL

greentech.training, Machine Learning Intern (Remote)

Jun 2023 – Sep 2023 | Berlin, Germany

- Developed a habitat suitability model (HSM) by processing gigabytes of climate and soil data from (WorldClim, SoilGrids) to train an ensemble model achieving an accuracy (TSS/ROC) > 0.7.
- Built a companion plant knowledge graph with 230+ nodes and 2,100+ relationships in Neo4j and developed an iterative pruning algorithm to recommend optimal companion plants.
- Tech Stack: Python (Flask), R (Shiny, biomod2, raster), Neo4j (Cypher), Microsoft Azure (VMs)

Tunisie Telecom, Software Developer Intern

Jun 2022 – Aug 2022 | Monastir, Tunisia

- Created detailed UML and Entity-Relationship diagrams, and built the PHP backend by manually writing all SQL queries for its 15 API endpoints.
- Built the native Android client in Java, implementing features such as user authentication, invoice history, and payment flows across 8 distinct UI screens.
- Tech Stack: Java (Android), PHP, MySQL, REST APIs, UML
